

ESIS

ESIS and our environmental subsidiary, Hygienetics Environmental Services, performs hazard assessments for a wide variety of chemical and physical agents, including dusts, fibers, fumes, gases, vapors, solvents, metals, carcinogens, noise, ionizing and non-ionizing radiation, and temperature extremes.

Assessments often involve the recognition, evaluation (including collection of samples), and provision of recommendations on noted exposures.

Depending on the number of samples or measurements required, we may also review existing controls, programs, and procedures to determine if they could be improved.
